

Practice Question-2

1. Inheritance:

Create a Java program using multilevel inheritance with the classes Employee → Manager → SeniorManager. Store employee ID and name in Employee, basic salary in Manager, and bonus in SeniorManager. Calculate and display the total salary.

2. Constructors:

Create a Java class Student with name, rollNo, and marks. Implement a default constructor and a parameterized constructor. Create objects using both constructors and display the student details.

3. Packages:

Create a package named calculator containing a class Arithmetic with methods for addition, subtraction, multiplication, and division. Import the package into another Java program and perform the operations based on user input.
